Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4 and 9, drawn to a method of manufacturing a piezoelectric transducer, classified in class 29, subclass 25.35.
- II. Claims 5-8, drawn to a piezoelectric transducer, classified in class 310, subclass 334.

The inventions are distinct, each from the other because:

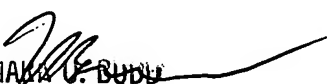

Inventions Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the transducer structure of group II can be made by methods other than those of Group I, e.g. the array could be formed by a molding process rather than a cutting process.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
